*Si chiama **#Akelius** ed è molto più di un'amma* 📱

This year, hundreds of teachers in Italian schools have successfully tested the Akelius program to help their students learn Italian and mathematics in an engaging and innovative way.

Launched in 2021 by UNICEF as a tool for newly arrived children in Italy (NAI) to learn Italian as a second language🇮🇹(as a second language after the native one), Akelius has also proven to be increasingly suitable as a support for the study and inclusion of students with special educational needs (SEN) and specific learning disabilities (SLD).

Data presented today by the **ISMU Foundation** and UNICEF reveal that 73% of Italian teachers who use Akelius experience greater engagement and interest from their students, and, in 40% of cases, the acquisition of skills above the expected level for those specific activities.

If you're a teacher, you can download Akelius Languages—the main app with Italian and math courses—and Akelius Training (with training modules for teachers) for free from the Google Play Store (for Android) and the App Store (for iOS/Apple).

UNICEF promotes the use of Akelius in 20 countries around the world, benefiting 321,000 students and 15,000 teachers.
